RE: Survey Notification
Property Parcel PID #R17400-02-12 & R17400-02-14

To Whom It May Concern:

This letter is to provide you information regarding the route SCE&G has selected for the future Blythewood – Killian segment of the V.C. Summer Nuclear Station – Killian 230 kV Line and SCE&G's plans to survey the selected route. This new electric line is required to distribute a portion of the electricity that will be generated by the two new nuclear generating units to be built near the existing V.C. Summer Nuclear Station.

After executing a comprehensive, three-phase transmission line siting study that included two (2) community workshops, SCE&G has selected a route for the future line that will minimize effects on environmental and cultural resources, land use, and the scenic quality of the region. The selected line route will, or could possibly, cross your property. The final, precise location of the line will be determined by a centerline survey of the line route that will be completed in the near future. To illustrate the general location of the future line in relation to your property, we have attached a map that shows a 400-foot wide corridor that crosses, touches, or comes very close to your property. The actual width of the right-of-way will not be 400-feet wide; rather, it will likely be only 120-feet wide in open areas or possibly less where it runs beside other utility or road rights-of-way. Although we anticipate the final route will be within the 400-foot wide corridor, some exceptions may occur due to inaccuracies in county tax mapping or discoveries made when we survey the line route that may affect the line's final location.

Line surveying is scheduled to begin in the late summer or early fall of 2010. This letter is intended to comply with the requirements of S.C. Code Ann. § 28-2-70 (C) to provide reasonable notice of SCE&G's intent to survey a new transmission line route that will likely, or could possibly, affect your property. If you have any questions about plans to survey the new line's route or the rights-of-way involved with this project, please call Mr. Mac Sample at 803-217-4837. Mac is SCE&G's right-of-way representative in the area and will be working with you during the right-of-way acquisition phase of the project.

Thank you in advance for your cooperation on this vital energy supply project.

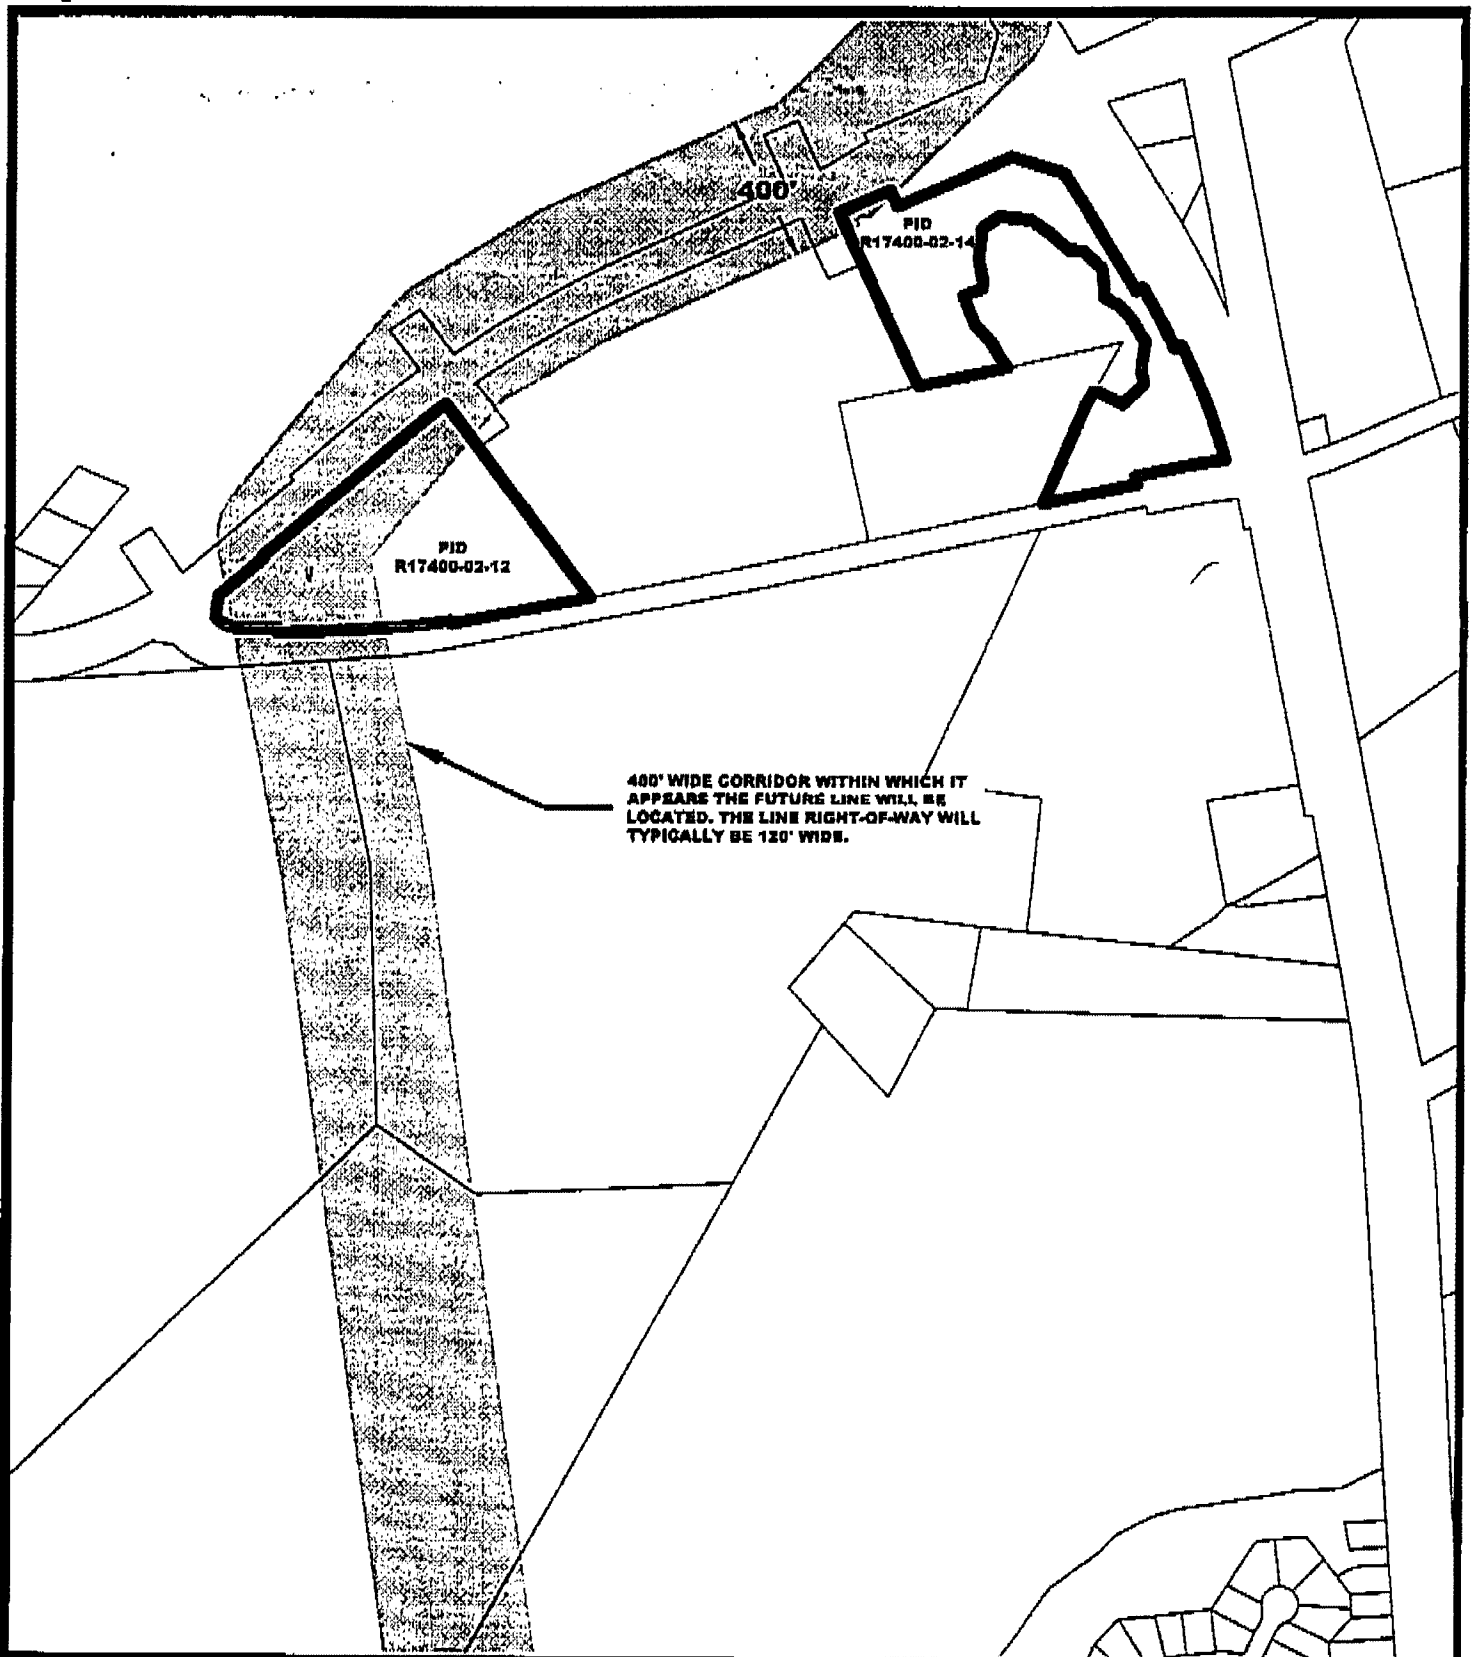

Sincerely,

Robert C. Lindler, P.E.
